

+Offline Agentic AI Platform

Comparison White Paper

Scope: Comparison of 1× GB10, 2× GB10, Dell PowerEdge R770 with 2× RTX PRO 6000 Blackwell 96GB, and Dell PowerEdge R7725 with 2× RTX PRO 6000 Blackwell 96GB for offline 120B-class model deployments.

Executive Summary

For a single-user or small-team deployment, a single GB10 provides a simple, low-power, highly integrated platform. Two linked GB10 systems improve capacity and support multi-agent workflows. For demanding users, enterprise operations, TAA-oriented procurement, and long-term growth, the R770/R7725 with dual RTX PRO 6000 GPUs is the preferred platform.

Recommended Software Stack

- Ubuntu Server or supported Linux distribution
- Ollama
- Open WebUI
- OpenHands
- Aider
- OpenCode
- tmux
- Git and Git worktrees
- vLLM (recommended for larger deployments)

Platform Comparison

Attribute	1× GB10	2× GB10	R770 + 2× RTX PRO 6000	R7725 + 2× RTX PRO 6000
Target Users	Single user	Small team	Demanding users	Demanding users
Memory	128GB unified	256GB combined	512GB+ system RAM	512GB+ system RAM
GPU Memory	Unified architecture	Unified clustered	192GB VRAM	192GB VRAM
120B Model	Usable	Recommended	Excellent	Excellent
200B Model	Limited	Possible	Good	Good
Power	Very low	Low	High	High
TAA Procurement	Uncertain	Uncertain	Strong	Strong

Expandability	Limited	Limited	Excellent	Excellent
Remote Mgmt	Basic	Basic	iDRAC	iDRAC

120B Model Usability

A 120B-class model represents the recommended balance of capability and resource requirements for infrastructure engineering, Linux administration, networking, documentation generation, and agentic workflows.

Task	1× GB10	2× GB10	R770/R7725 + 2× RTX PRO 6000
Linux Administration	Good	Very Good	Excellent
Cisco IOS-XE	Good	Very Good	Excellent
BGP/FRR	Good	Very Good	Excellent
BIND/DNS	Very Good	Excellent	Excellent
Multi-Agent Workflows	Limited	Excellent	Excellent
Concurrent Users	Limited	Moderate	High

Recommended Configurations

1× GB10: Gemma 4 120B-class deployment (quantized), Ollama, Open WebUI, OpenHands, Aider, tmux.

2× GB10: 120B primary model plus reviewer agent, OpenHands, Open WebUI, vLLM where appropriate.

R770/R7725: Dual RTX PRO 6000 96GB GPUs, 512GB RAM, vLLM, Open WebUI, OpenHands, Aider, enterprise storage and management.

Conclusion

For experimentation and personal use, GB10 platforms are attractive due to simplicity and power efficiency. For demanding users, enterprise supportability, TAA-oriented procurement, and future expansion, the Dell PowerEdge platforms with RTX PRO 6000 GPUs are the preferred long-term solution.
